New cancer research

Category: Diseases open for Research

Dear Colleagues and Patients,

the Keshe Foundation Health Department is glad to announce the next step in their Cancer/Tumor Research Processing Method. Due to be announced, the new Cancer/Tumor Research Processing Method is a completely new and unfamiliar method of research and development. The technological procedure is to be carried out by the use of two new devices placed on certain parts of the body, in order to try to encourage the body, while preventing it from producing more cancer cells in the organs and lymph, using the working mechanism of the body itself.

The purpose of the method is dilution, or what we call processing of cancer cells by the body itself, rather than using any outside materials.

This method of plasmatic intervention has never been tried at a large scale, and now the development of the technology is advanced enough for the Foundation to be able to ask the world population to participate in this trial to increase our knowledge and database.

Duration of trial: To see the first results, the trial will run for about 60 days from the date of beginning.

The Keshe Foundation is a spaceship program, and its trials are meant for the development and use of new systems in deep space.

We use qualified medical staff to monitor the process, and we are not bound by any borders or nationality.

The medical team monitoring your case can be anywhere around the world, as this is an international collaboration to find an easy, effective and direct path to the correct function of the body of man, in order to reverse the disease process which had been previously started and leads to the creation and development of cancer or tumors.

We are open about our research, and we invite independent cancer research groups to take part and monitor our procedure and progress.

Effectiveness of the method in patients without prior chemotherapy is assumed to be higher when compared to patients with prior chemotherapy and other treatment attempts.

In patients with prior chemotherapy, the process could take a longer period of time, but improvement is still not impossible.

The donation amount the Foundation is hoping to receive for the New Cancer/Tumor Research is around 5000 Euro, including diagnosis, preparation of devices, and follow up of the cases by doctors.

Upon completion of the trial, the data and results will be released openly to the world population, exactly as we have done with our other patented applications and technologies, so that it allows us to make the technology accessible to many more people.

The reason for this new trial in recruiting volunteers is to increase our database on a wider scale.

The required number of volunteers who have not undergone previous chemotherapy is up to 1000.

The number of patients with prior chemotherapy treatment is up to 10.

Patients - volunteers who have interest in participating in the program, please send your applications to the following e-mail: healthkf@gmail.com

If you are a cancer clinic or organization that would like to participate in our trial by introducing volunteers, or if you would like to be monitoring certain parts of this trial, please contact us through the same e-mail.

For national and international health organisations that would like to introduce their own cases and monitor the progress of their volunteers collectively with the Keshe Foundation, please contact Dr. E. Kostova.

Thank you!
